

Weather Insights for Partners - v3.0

Domain: Insights | Usage Classification: Restricted

Geography: Global*

*See “Supported Insights” table below for availability of specific insights

Partner Requirements: Insight implementation on partner property must include click through ability to weather.com.

Prerequisite: [V3 Links API](#) access is necessary to retrieve the click through urls.

Overview

The Insights API returns weather and lifestyle insights that can be used by approved partners to provide contextual narratives relevant to a given location.

HTTP Headers and Data Lifetime - Caching and Expiration

For details on appropriate header values as well as caching and expiration definitions, please see [The Weather Company Data | API Common Usage Guide](#).

Request URL Construction

Atomic API URL Examples:	Aggregate Product Name (requires v3 Aggregate Common Parameter API)	v3-insights
Request by Geocode: Required Parameters: geocode, insightType, units, format, apiKey, language, par		
https://api.weather.com/v3/insights?geocode=40.58,-111.66&insightType=all&units=e&language=en-US&format=json&par=foo&apiKey=<yourApiKey>		
Request by Place ID: Required Parameters: placeid, insightType, units, format, apiKey, language, par		
https://api.weather.com/v3/insights?placeid=327145917e06d09373dd2760425a88622a62d248fd97550eb4883737d8d1173b&insightType=all&units=e&language=en-US&format=json&par=foo&apiKey=<yourApiKey>		
Request by Postal Key: Required Parameters: postalKey, insightType, units, format, apiKey, language, par		
https://api.weather.com/v3/insights?postalKey=30311:US&insightType=all&units=e&language=en-US&format=json&par=foo&apiKey=<yourApiKey>		

Request Query Parameter Definition

Reference: [The Weather Company Data | API Common Usage Guide](#) - Includes common URL query parameter components including units, language and format.

Parameter	Value
par	Required. Must work with your TWC representative to assign a unique par value for your use case.
insightType	Required. Use <i>insightType=all</i> if you want all valid insight types available in the response. You can also include one or more

	specific insightTypes in a comma separated list, for example <i>insightType=shortTermPrecipInsight,thunderstormSoonInsightj</i>
--	---

Supported Insights

The following table represents the current list of supported insights. In order to get access to these insights, the TWC API team will first need to create a partner value for your use case. Language support can be found in the [The Weather Company Data | API Common Usage Guide](#).

insightType	Always Available	Example Insight Text	Insight Logic	Geography Support	Language Support
breakingVideoInsight	No	Hurricane Nicole makes landfall in Florida	Breaking news video headline relevant to US users, curated by the TWC editorial team. Not always returned. Headline will click through to the video on weather.com Note: In cases of large-scale weather events, the insight may show for English speaking users globally, not limited to the US. This is rare and only for largest weather events.	US*	en
trendingVideoInsight	No	Halloween forecast - will it be a trick or treat?	Trending video headline relevant to US users, curated by the TWC editorial team. Not always returned. Headline will click through to the video on weather.com	US	en
shortTermPrecipInsight	No	Rain beginning around 7:15pm	Will only be returned if there is forecasted precipitation (rain, snow, or mixed precipitation) within the next 7 hours.	Global	All
thunderstormSoonInsight	No	Thunderstorms likely tonight	Will only be returned if there are severe thunderstorms in the forecast the next 48 hours.	Global	All
temperatureChangeInsight	No	Tomorrow will be nearly the same as today	Will be returned in API response unless the following conditions are met (i) temperature difference is not significant (less than or equal to 3 degrees Fahrenheit), (ii) the current time is within 3 hours of sunrise or sunset, and (iii) sunInsight is present. - If it is prior to 3pm local, the insight will compare yesterday's high temperature with today's high temperature - If it is after to 3pm local, the insight will compare today's high temperature with tomorrow's high temperature	Global	All
snowInsight	No	Snow accumulation expected. 1-2in forecast	Will only be returned if there is snow forecast over the next 48 hours that will result in accumulation.	Global	All
chancePrecipInsight	No	Rain possible Tuesday evening.	Will only be returned if there is forecasted precipitation (rain, snow, or mixed precipitation) within the next 48 hours and shortTermPrecipInsight does not exist.	Global	All
recordTempInsight	No	Record high temperatures expected.	Will only be returned when record or near record temperatures are expected in the next 48 hours. *Not guaranteed to always show when record temperatures are expected.	Global*	All
feelsLikeInsight	No	Wind chill will make temperature tonight feel like	Will only be returned when there is a significant difference expected between the	Global	All

		20C	feels like temperature and the actual temperature in the next 48 hours.		
pollenInsight	No	Grass pollen expected to increase tomorrow	Will only be returned if there is an expected difference in pollen levels between today and tomorrow.	Global	All
windInsight	No	Expect high winds up to 26 mph	Will only be returned if there are high sustained winds forecast today or tomorrow.	Global	All
sunnyDayInsight	No	Expect tomorrow to be next sunny day Expect Wednesday to be next dry day	Will only be returned in the following situations: - Previous two days and today have been wet (rain/snow/mixed) - Previous two days and today have been cloudy	Global	All
uvIndexInsight	No	UV will be high, an increase from yesterday	Will only be returned in the following situations: - Today's UV is/will be high or very high, which is an increase from the same period yesterday - Today's UV is/will be extreme	Global	All
fluInsight	No	Flu risk remains very high over the next few days	Will only be returned if flu risk is predicted to be high or very high over the next 3 days.	US	en
forecastIceInsight	No	Icy conditions expected tomorrow	Will only be returned if sleet/freezing rain is expected in the next 30 hours	Global	All
forecastFogInsight	No	Dense fog expected tomorrow	Will only be returned if dense fog is expected in the next 30 hours	Global	All
sunInsight	Yes*	Sunset will be at 8:21 pm	Will be returned if there is a sunrise/sunset happening today/tomorrow. If experiencing a polar day or polar night, the temperature change insight will default in its place.	Global	All

Note: If the API is called for a location and/or language that has no relevant insights available, the API will return an HTTP Code of 204 or 400.

Response Data Elements & Definitions

Note: The table below does not represent the sort order of the API response.

Reference: [The Weather Company Data | API Common Usage Guide](#) - Includes URL Path Components, Error Status Codes, Units of Measure, Postal Code Support, Language Codes

Field Name	Description	Type	Sample	Nulls Allowed	Translated
insightType	Defines the type of insight being provided.	string	"shortTermPrecipInsight"	Y	N
insightText	The insight text to display to the user. This will be kept to a maximum character count of 46 where possible.	[string]	["Rain beginning at 7:15pm."]	Y	Y
insightTextLong	The long version of the insight text to display to the user. This will be kept to a maximum character count of 90 where possible. In situations where there is not a separate, long version of text, this will match the insightText field.	[string]	["Occasional rain beginning around 7:15pm. Some rain will be heavy."]	Y	Y
insightHeadline	The insight headline to display to the user.	[string]	["On the Radar"]	Y	Y
insightImage	The image url to display with the insight. They will be 96x72 and in jpeg format.	[string]	["https://s.w-x.co/util/image/w/ss_radar_rain.jpg"]	Y	N
insightLinksElement	Indicates the corresponding Links API response element name to use when linking users from L2 to L3. See Appendix 1 for examples.	[string]	["webShortTermPrecipInsight"]	Y	N

insightLinksElementAnchor	If a value exists, append this to the end of the link when linking users from L2 to L3. See Appendix 1 for examples.	[string]	["#detailIndex1"]	Y	N
insightAlternativeURL	For some insights, the link may not be available in the Links API response due to the nature of the link (for example, a breaking news insight link is not static and only relevant for a short period of time, therefore would not be available in the Links API response). In these cases, this field will include the url to use when linking users from L2 to L3. See Appendix 1 for examples.	[string]	null	Y	N
insightValidTimeUtc	An epoch value indicating the valid time of the insight.	epoch	null	Y	N
insightPriority	An integer indicating the priority of the insight relevant to other insights. The highest priority insight will be 1, followed by 2, 3, 4 etc. for as many insights that are available in the response. See Appendix 3 for a brief overview of how insight priority is chosen.	integer	1	Y	N
insightPriorityAlternative	An alternative priority to the insightPriority field.	integer	1	Y	N
insightShowNotification	Customer designated field used to determine whether or not to display the insight as a weather notification	boolean	true	Y	N
insightShowWidget	Customer designated field used to determine whether or not to display the insight on a home screen display	boolean	false	Y	N
insightShowCard	Customer designated field used to determine whether or not to display the insight on a headline card	boolean	true	N	N
supplement	The supplement field is an object that will be used to include any fields that are unique to a given insightType. If an insightType does not have unique fields, it will be null. See Appendix 2 for list of supplement values for given insights.	{object}		Y	N

Appendix 1 - Linking to weather.com

It is required that the insight is clickable and redirects users to a weather.com url for additional information.

When linking a user to corresponding TWC weather.com pages, there are three fields available to utilize:

- insightLinksElement
- insightLinksElementAnchor
- insightAlternativeURL

The following logic should be applied when determining the url to use for linking a user to TWC:

1. Does the insightLinksElement field have a value?
 - a. If yes, then:
 - i. Use that value to reference the corresponding url from the Links API.
 - ii. See if the insightLinksElementAnchor field has a value. If it does, append that value, as is, to the end of the url from the Links API.
 - b. If no, then:
 - i. Take the url from the insightAlternativeURL field as is and use that as the url.

Example 1 - insightLinksElement has a value. insightLinksElementAnchor is null.

Insight API response:

```
{  
  "insightType": "shortTermPrecipInsight",  
  "insightText": ["On and off storms from 6:15 PM to 6:30 PM."],  
  "insightHeadline": ["On the Radar"],  
  "insightImage": ["https://s.w-x.co/util/image/w/ss_radar_rain.jpg"],  
  "insightLinksElement": ["webShortTermPrecipInsight"],  
  "insightLinksElementAnchor": null,  
  "insightAlternativeURL": null,  
  "insightValidTimeUtc": 1613509200,  
  "insightPriority": 3,  
  "supplement": null  
},
```

Links API response:

```

fluInsight	Y	"supplement": null

Appendix 3 - Insight Priority

Insight priority order is determined by TWC and subject to change. Priority order is determined based on a few factors:

- Condition: Precipitation related insights generally take priority over other weather insights because that is the most important condition most users look for when planning their day/weekend.
- Impact: Severe weather related insights generally take priority over typical weather insights
- Timing: What is the timeframe the insight is communicating? Insights communicating events now generally take priority over insights communicating events later. For example, if there is a wind insight stating wind will be high *today* it may take priority over a pollen insight stating pollen is increasing *tomorrow*.

There is always 1 insight that is returned as a “default”, which will be lowest priority. In most cases, that is the sunInsight. In cases where there is no sunrise/sunset, the temperatureChangeInsight will default instead.
